The Bachelor's Degree

In addition to the B.S. in Chemistry, two concentrations are available for chemistry students – premedical, and science of the environment. The pre-medical concentration is designed to prepare students for applying to medical school or other health professions. The science of the environment concentration is useful for students seeking a career in environmental technology or government agencies.

Advising

Students wishing to major in Chemistry should consult with an academic advisor upon admission to the University to make sure they are taking required courses in the proper sequence. In order to be a chemistry major, students need to complete a Change of Curriculum form on the Records and Registration website. There is no separate admission to the major.

First-year students should contact the science advisor in the Undergraduate Academic Advising Center. Students with more than 30 hours (transfer students and sophomores) should contact the College of Liberal Arts and Sciences Advising Professional.

All of the faculty in the Chemistry Department are available for advising. We suggest that you meet with your department advisor one time each semester to discuss courses, careers, and research opportunities. To set an appointment, contact the office manager at (217) 206-6589.

Refer to the Chemistry website at www.uis.edu/chemistry/ to view the department’s Sample Curriculum/Program Guide.

Assessment of Learning within the Discipline

A chemist graduating from UIS will be characterized as being able to:

- Integrate chemical knowledge
- Perform appropriate laboratory skills
- Communicate scientific information
- Apply the scientific process(es)
- Participate in the chemical profession

Students majoring in chemistry may be asked to participate in surveys of focus groups in order to assist the department in assessing the learning outcomes of the program. Other evidences of student learning (exam scores, research papers) will be used in an anonymous and confidential manner for Chemistry Department curriculum review and planning.

Grading Policy

Chemistry courses for which the student has attained a grade of C- or better will be applied toward the B.S. degree (grades of D+ or lower will not be accepted). Chemistry majors may repeat program courses for grade improvement only once.

General Education

All chemistry majors must fulfill the undergraduate general education requirements as described at the beginning of this catalog. Certain courses required for the UIS Chemistry Bachelor of Science degree...
also fulfill general education requirements, according to the table below. Consult with your academic advisor before registering to ensure that you take the correct courses in the correct sequence.

### Degree Requirements

#### Introductory Courses
- CHE 141 General Chemistry I 4
- CHE 142 General Chemistry II 4
- CHE 267 Organic Chemistry I 3
- CHE 268 Organic Chemistry I Laboratory 1
- CHE 269 Organic Chemistry II 3
- CHE 271 Organic Chemistry II Lab 1

#### Calculus (one year):
- MAT 115 Calculus I 8
- MAT 116 Calculus II 4

#### Physics (one year):
- ASP 201 University Physics I 8
- ASP 202 University Physics II 4

Total Hours 32

Transfer students with deficiencies in the introductory courses may enter the program conditionally but will be required to make up the deficiencies during their first year of study. This extra work may mean that some students will require more than four years to complete the B.S. degree. Transcripts submitted by transfer students must show that the following course requirement categories have been met:

- General Chemistry I and II
- Organic Chemistry with lab (one year)
- Calculus (one year)
- Physics, calculus based (one year)

#### Intermediate and Advanced Courses
- CHE 301 General Seminar 3
- CHE 321 Chemical Analysis 4
- CHE 322 Laboratory Techniques 1
- CHE 400 ECCE: Undergraduate Research 3
- CHE 401 Physical Chemistry I - Thermodynamics 3
- CHE 402 Physical Chemistry II 3
- CHE 415 Biochemistry I 4
- CHE 421 Instrumental Analysis 4
- CHE 422 Inorganic Chemistry 4

### Chemistry Electives
Total Hours 32

### Degree Plan*

*Listed below is a SUGGESTED Degree Plan. For OFFICIAL program information, please refer to the catalog content above and consult your academic advisor.

#### Year 1

##### Fall
- CHE 141 General Chemistry I 4
- MAT 115 Calculus I 4
- ENG 101 Rhetoric and College Writing 3
- Freshman Seminar (Humanities or Social Sciences) 3
  
  Hours 14

##### Spring
- CHE 142 General Chemistry II 4
- MAT 116 Calculus II 4
- ENG 102 College Writing and Civic Engagement 3
- Comparative Societies (Humanities or Social Sciences) 3

  Hours 14

#### Year 2

##### Fall
- CHE 267 Organic Chemistry I 3
- CHE 268 Organic Chemistry I Laboratory 1
- ASP 201 University Physics I 4
- BIO 141 Unity of Living Organisms 4
- General Education Requirement (Humanities or Social Sciences) 3

  Hours 15

##### Spring
- CHE 269 Organic Chemistry II 3
- CHE 271 Organic Chemistry II Lab 1
- ASP 202 University Physics II 4

  Hours 15
BIO 241  Biology of Organisms in the Environment  4  
(or equivalent)  
COM 112  Oral Communication  3  

Year 3  

Fall  
CHE 321  Chemical Analysis  4  
CHE 415  Biochemistry I  4  
CHE 322  Laboratory Techniques  1  
CHE 301  General Seminar  3  
ECCE Requirement (Global Awareness or U.S. Communities)  3  

Hours  15  

Spring  
CHE 421  Instrumental Analysis  4  
CHE 401  Physical Chemistry I - Thermodynamics  3  
CHE Concentration Course or elective  4  
General Education Requirement (Visual, Creative and Performing Arts Humanities)  3  
Elective  3  

Hours  17  

Year 4  

Fall  
CHE 400  ECCE: Undergraduate Research  2  
CHE Concentration Course or elective  3-4  
CHE 402  Physical Chemistry II  3  
ECCE U.S. Communities/Global Awareness  3  
General Education Requirement (Humanities or Social Sciences)  3  

Hours  14-15  

Spring  
CHE 400  ECCE: Undergraduate Research  1  
CHE Concentration Course or elective  4  
CHE 422  Inorganic Chemistry  4  
UNI 301  ECCE: Speakers Series  1  
General Education Requirement (Humanities or Social Sciences)  3  
Elective  3  

Hours  16  

Total Hours:  120-121  

The Minor in Chemistry  
To earn a minor in Chemistry, students must complete a minimum of 19 semester hours from the following courses. A minimum of eight hours of course work must be taken at UIS.  

Core courses  
CHE 141  General Chemistry I  4  
CHE 142  General Chemistry II  4  
CHE 267  Organic Chemistry I  3  
CHE 268  Organic Chemistry I Laboratory  1  
CHE 322  Laboratory Techniques  1  

Electives  
Select two of the following:  6  
CHE 400  ECCE: Undergraduate Research  
CHE 480  Special Topics In Chemistry  

Analytical chemistry  
CHE 321  Chemical Analysis  
CHE 421  Instrumental Analysis  
CHE 431  Environmental Chemistry  

Organic and Biochemistry  
CHE 269  Organic Chemistry II  
CHE 271  Organic Chemistry II Lab  
CHE 415  Biochemistry I  
CHE 416  Biochemistry II  
CHE 418  Bioanalytical Chemistry  
CHE 433  Physiological Chemistry  

Physical and Inorganic Chemistry  
CHE 401  Physical Chemistry I - Thermodynamics  
CHE 402  Physical Chemistry II  
CHE 422  Inorganic Chemistry  

Total Hours  19  

Courses  
CHE 101. Preparatory Chemistry. 3 Hours.  
Course is designed to enhance problem solving skills and develop background for the general chemistry sequence. Course Information: Placement in MAT 094. This course fulfills a general education requirement at UIS in the area of Physical Science without a Lab.  

CHE 103. Introduction to Nanotechnology. 3 Hours.  
Nanotechnology is a rapidly growing force in world economics, driving the next Industrial Revolution. This course will examine what nanotechnology is through lecture and laboratory exercises. Additionally, societal and environmental implications of nanotechnology will be explored through readings and discussions. Course Information: This course cannot be counted toward any science major or minor. This course fulfills a general education requirement at UIS in the area of Physical Science without a Lab (IAI Code: P1 903).  

CHE 104. Introduction to Nanotechnology Lab. 1 Hour.  
Nanotechnology is a rapidly growing force in world economics, driving the next Industrial Revolution. This course will examine what nanotechnology is through lecture and laboratory exercises. Additionally, societal and environmental implications of nanotechnology will be explored through readings and discussions. Course Information: This course cannot be counted toward any science major or minor. This optional lab to be taken with CHE 103. This course fulfills a general education requirement at UIS in the area of Physical Science with a Lab. (IAI Code: P1 903L).  

CHE 111. Chemistry of Everyday Life. 3.4 Hours.  
An introductory chemistry course focusing on applications of chemistry in living organisms and in society examined in both the laboratory and lecture settings. Chemical principles are studied in relation to health, consumer awareness, and the environment. Course Information: This course cannot be counted toward a science major or minor. Four hour option includes laboratory. This course fulfills a general education requirement at UIS in the areas of Physical Science with a Lab (4 hours) and without a Lab (3 hours) (IAI Code: P1 903L).
CHE 121. Materials of the Artist. 3 Hours.
Art from cave paintings to digital images has been closely intertwined with chemistry and technology. In this course we will investigate the properties and applications of materials used by artists (minerals, metals, dyes, pigments, paper, glass, ceramics, and polymers). Course Information: This course cannot be counted toward any science major or minor. The optional laboratory (CHE 122) provides hands-on experience with these materials. This course fulfills a general education requirement at UIS in the area of Physical Science without a Lab (IAI Code: P1 903).

CHE 122. Materials of the Artist-Lab. 1 Hour.
Art from cave paintings to digital images has been closely intertwined with chemistry and technology. In this course we will provide hands-on experience with the materials used by artists (minerals, metals, dyes, pigments, paper, glass, ceramics, and polymers). This optional laboratory to be taken with CHE 121. Course Information: This course cannot be counted toward any science major or minor. This course, with CHE 121, fulfills a general education requirement at UIS in the area of Physical Science with a Lab (IAI Code: P1 903L).

CHE 124. General Chemistry for the Health Professions. 4 Hours.
First semester of a chemistry sequence for health professions majors. Topics include unit analysis, properties of matter, reactions in solutions, basic stoichiometry, behavior of gases, nuclear chemistry, basic atomic structure and chemical bonding. Three hours of lab experience per week. Course Information: Excludes CHE, BIO, and CLS majors. Prerequisites: Placement in MAT 094 or higher. This course fulfills a general education requirement at UIS in the area of Physical Science with Lab.

CHE 131. Intro to Forensic Science. 3 Hours.
Introduces the scientific basis of forensics investigations, using a case history/problem-solving approach. Discusses scientific procedures for evidence collection at crime scenes and the laboratory analysis of evidence. Topics include fingerprints, soil/imprints, toxicology, ballistics, arson/explosions, blood/body fluid analysis, DNA profiles, and PCR technology. Course Information: This course cannot be counted towards a CHE major or minor. Same as CLS 131. This course fulfills a general education requirement at UIS in the area of Physical Science without a Lab.

CHE 132. Intro/Forensic Science Lab. 1 Hour.
This laboratory illustrates many of the basic scientific procedures and analyses used in forensic science laboratories. Exercises include fingerprinting, hair/fiber analysis, soil/glass analysis, PCR and DNA profiling, toxicology, blood spatter analysis, and field tests for blood, semen, and drugs. This optional laboratory to be taken with CHE 131. Course Information: Same as CLS 132 This course cannot be counted towards a CHE major or minor. This course, along with CHE 131, fulfills a general education requirement at UIS in the area of Physical Science with a Lab.

CHE 137. Chemistry Cooks. 3.4 Hours.
A laboratory course emphasizing the general principles and theories of chemistry including atomic structure and states of matter, bonding, stoichiometry, acid-base concepts, periodicity and solution chemistry. The chemical principles will be demonstrated with laboratory exercises that involve the use of materials and methods common to the ordinary kitchen. Course Information: This course cannot be counted toward any science major or minor. The course is intended for non-majors. This course fulfills a general education requirement at UIS in the area of Physical Science with a Lab (4 hours) or without a Lab (3 hours).

CHE 141. General Chemistry I. 4 Hours.
First semester of general chemistry for science students. Topics include properties of matter, stoichiometry, solutions chemistry, thermodynamics, gas laws, atomic structure, molecular geometry and chemical bonding. Course Information: Three hours of lab per week. Prerequisites: High school chemistry, placement in MAT 094, or CHE 101 with a grade of B or better.

CHE 142. General Chemistry II. 4 Hours.
The second semester of university-level modern chemistry for science students. Topics include solid structures, solution properties, kinetics, entropy, nuclear chemistry, electrochemistry and equilibria (acid-base and solubility). Laboratory experience is included. Course Information: Prerequisite: CHE 141 or equivalent. This course fulfills a general education requirement at UIS in the area of Physical Science with a Lab (IAI Code: P1 902L).

CHE 151. Survey of Organic and Biochemistry. 4 Hours.
This course will give students an overview of the principles of organic chemistry and biochemistry. It will focus on their application to the health sciences and is designed for students in nursing and applied health sciences. Course Information: Three hours of lab per week. Prerequisites: CHE 141, or equivalent.

CHE 199. Tutorial in Chemistry. 2-4 Hours.
Students interested in a tutorial must secure the consent of the faculty member concerned before registration and submit any required documentation to him or her. Course Information: May be repeated to a maximum of 12 credit hours.

CHE 267. Organic Chemistry I. 3 Hours.
First semester of university-level organic chemistry. Study of organic structure, reactions and mechanisms. Includes relationship of structure to function. Course Information: Prerequisite: CHE 141 and CHE 142 or equivalent.

CHE 268. Organic Chemistry I Laboratory. 1 Hour.
Laboratory course cultivating techniques for separation, purification, and identification of organic compounds. Includes an introduction to spectroscopy and application of techniques to illustrative organic preparations. Course Information: Prerequisite: CHE 267, or equivalent, or concurrent enrollment.

CHE 269. Organic Chemistry II. 3 Hours.
Second-semester of university-level organic chemistry that builds on a basic knowledge of organic structure, reactions, and mechanisms. Focus on organic synthesis and reaction mechanisms. Includes an introduction to bio-molecules. Course Information: Prerequisite: CHE 267 and CHE 268, or equivalent.

CHE 271. Organic Chemistry II Lab. 1 Hour.
Second-semester course in organic chemistry laboratory. Continues to expose students to new laboratory techniques and integrates spectroscopy with synthesis. Course Information: Prerequisite: CHE 267 and CHE 268 or equivalent.

CHE 301. General Seminar. 3 Hours.
Development of writing skills and discussion of professional ethics. Mastery of library skills and ability to organize material demonstrated by production of a paper on a scientific topic of interest and a seminar based on that paper. Course Information: Same as BIO 301. Prerequisite: ENG 101 and 102 or equivalents. COM 112 recommended. For the sophomore or junior year. Restricted to Chemistry and Biology majors.
CHE 302. ECCE: Undergraduate Research. 3 Hours.
Design and conduct an original research project integrating knowledge introduced in the lower-division chemistry core. Students will also receive instruction on a variety of topics important to the conduct of scientific research and their continued professional development. At the conclusion students produce individual scientific reports and make a professional group presentation. Course Information: Prerequisites: CHE/BIO 301 and instructor approval.

CHE 321. Chemical Analysis. 4 Hours.
Introduction to acquisition and analysis of chemical data, statistical analysis, and method evaluation. Discussion of equilibrium, acid-base chemistry, electrochemistry and optical spectroscopy. Three hours of lab per week. Course Information: Prerequisites: CHE 141 and CHE 142 or equivalent.

CHE 322. Laboratory Techniques. 1 Hour.
Introduction to basic laboratory techniques and procedures necessary for competent performance. Topics will include laboratory safety, volumetric and gravimetric measurements, titrations, critical evaluation of data, laboratory mathematics, preparing solutions and dilutions, and basic spectrophotometric measurements. Course Information: Prerequisite: CHE 141 and CHE 142 or equivalent.

CHE 361. ECCE: Global Greening for a Sustainable Future. 3 Hours.
An integrated approach to environmental issues that explore the contribution and roles of the physical sciences to achieve sustainability as the ultimate goal with a global perspective. Issues include population growth, energy and alternative fuels, and green chemistry. Course Information: This course fulfills an Engaged Citizenship Common Experience requirement at UIS in the area of Global Awareness.

CHE 362. ECCE: Science and World Religions. 3 Hours.
This interdisciplinary course explores the relationship among science and the five major world religions: Hinduism, Judaism, Christianity, Buddhism, and Islam. Topics include the creation/evolution controversy, the existence of soul, and the possibility of miracles. Course Information: This course fulfills an Engaged Citizenship Common Experience requirement at UIS in the area of Global Awareness.

CHE 363. ECCE: Energy and the Environment. 3 Hours.
This course will critically explore the scientific, economic, political, and ethical relationships between energy and the environment. Students will be asked to examine their own values and propose how they will use/conserve energy in the present and in the future. Course Information: This course fulfills an Engaged Citizenship Common Experience requirement at UIS in the area of Global Awareness.

CHE 375. General Biochemistry. 3 Hours.
This is an introductory one semester course in biochemistry that provides a foundation for health science by investigation of the simple molecular components of the cell to the complex dynamics of metabolism and information transfer. Course Information: Prerequisite: CHE 267.

CHE 399. Tutorial. 1-12 Hours.
Independent studies are meant to serve as a mini project to help prepare students for CHE 400, Undergraduate Research. It is intended to supplement, not supplant, regular course offerings. Students interested in an independent study must secure the consent of a faculty advisor prior to registration and submit any required documentation to the advisor. Course Information: May be repeated to a maximum of 12 hours.

CHE 400. ECCE: Undergraduate Research. 1-6 Hours.
Investigation of a specific problem of interest to the student. Directed and reviewed by a faculty member. At the conclusion of the project, the student will write a scientific report and make a professional presentation evaluated by the faculty. Course Information: May be repeated with approval. This course fulfills an Engaged Citizenship Common Experience requirement at UIS in the area of Engagement Experience.

CHE 401. Physical Chemistry I - Thermodynamics. 3 Hours.
Development of principles of classical thermodynamics; equations of state; first, second, and third laws and their applications. Course Information: Prerequisite: MAT 115 and MAT 116, ASP 201 and passing grade or concurrent enrollment in ASP 202, CHE 269, and CHE 271, or equivalent.

CHE 402. Physical Chemistry II. 3 Hours.
Examination of thermodynamic considerations that control the position of chemical equilibrium and kinetic factors that govern reaction rates. Discussion of current theories of chemical bonding in ionic and covalent compounds. Emphasis on correlation of experimental data and prediction of structures of chemical compounds. The laboratory portion includes calorimetry, fluorescence spectroscopy, and scanning probe microscopy. Course Information: Prerequisite: CHE 401 or equivalent and a passing grade in ASP 202.

CHE 405. Chemistry Laboratory Assistant. 1.2 Hour.
For students desiring to gain teaching and service experience in chemistry and improve their laboratory skills. Students will assist faculty members in setting up and conducting laboratory classes. Students are expected to prepare reagents accurately and assist others in developing laboratory techniques and operating instrumentation under supervision of a faculty member.

CHE 415. Biochemistry I. 3,4 Hours.
The general objectives of this course include, but are not limited to, developing an appreciation for the fundamentals of biochemistry and the study of molecules with biological significance, namely proteins, lipids, carbohydrates, and nucleic acids. This course will examine the building blocks essential of the assembly of these chemical macromolecules, as well as the resultant structural consequences. Course Information: Prerequisite: CHE 267 and CHE 268 or equivalent.

CHE 416. Biochemistry II. 3,4 Hours.
The general objectives of this course include, but are not limited to, developing an appreciation for the fundamentals of biochemistry and the study of biomolecules and their role in biological systems. The course will include a comprehensive review of enzymology, protein dynamics, metabolism, and biosynthesis. Course Information: Prerequisite: CHE 415 (with lab) or equivalent.

CHE 418. Bioanalytical Chemistry. 3 Hours.
The general objectives of this course include, but are not limited to, developing an appreciation for the fundamentals of bioanalytical chemistry. The course will emphasize the manipulations of biologically relevant molecules through laboratory exercises that include techniques in proteins enzymes, and nucleic acid chemistry. Course Information: Prerequisites: CHE 267 and CHE 268, or equivalent and CHE 475, or equivalent.
CHE 421. Instrumental Analysis. 4 Hours.
Overview of separation methods such as Gas Chromatography, High Performance Liquid Chromatography and Capillary Electrophoresis. Spectroscopic techniques include Mass Spectrometry, Optical Spectroscopy including UV-Visible, Infrared and Atomic Absorption. Course Information: Prerequisite: CHE 267, or equivalent.

CHE 422. Inorganic Chemistry. 4 Hours.
Survey of the bonding, structure, and reactivity of solid-state materials, main group compounds, and transition metal complexes. Examples from the interdisciplinary areas of organometallic chemistry, bioinorganic chemistry, and materials science will be presented. The synthesis and characterization of inorganic materials will be explored in the laboratory. A strong emphasis will be placed on the rapidly emerging fields of materials science and nanotechnology. Course Information: Prerequisite: CHE 402.

CHE 425. Medicinal Chemistry. 3 Hours.
Pharmacotherapy is defined as the treatment of disease through the administration of drugs. Medicinal chemistry is an introductory course in pharmacology that introduces the underlying principles of the mechanisms of actions of drugs used to treat diseases (pharmacodynamics), the properties of drugs (pharmacokinetics), and how they vary from individual to individual (pharmacogenetics). Course Information: Same as BIO 425.

CHE 431. Environmental Chemistry. 4 Hours.
Chemical principles behind various environmental processes and analytical chemistry techniques used to solve environmental problems will be introduced. Interactions between the geosphere, the hydrosphere, and the atmosphere will be explored. Issues of waste remediation, disposal and energy resources will be addressed. Course Information: Same as ENS 447.

CHE 432. Introduction to Neuroscience. 3 Hours.
While neurobiology traditionally focuses on the biology of the nervous system, neuroscience is an interdisciplinary field that incorporates principles from biology, chemistry, mathematics and medicine to provide a more comprehensive overview of the nervous system. In order to understand how the nervous system is organized and functions to generate behavior, we will examine the central and peripheral nervous system in anatomical, electrophysiological, cellular, and molecular terms. Course Information: Same as BIO 432.

CHE 433. Physiological Chemistry. 4 Hours.
Physiological biochemistry includes a survey of biochemical structures and functions, with emphasis on human metabolism. Regulation and metabolic adaptation are discussed for physiologic conditions such as fasting, exercise, starvation, and various disease states. Course Information: Prerequisite: CHE 267. Anatomy and physiology recommended.

CHE 465. Environmental Toxicology. 3,4 Hours.
Study of the effects of chemical and physical agents on the health of the public and environment. Included are sources, transport, chemical behavior, and biochemical mechanisms for adverse health effects from environmental pollutants. Course Information: Prerequisite: CHE 267. Anatomy and physiology recommended.

CHE 475. General Biochemistry. 3 Hours.
This is an introductory one semester course in biochemistry that provides a foundation for the health sciences by investigating the simple molecular components of the cell to the complex dynamics of metabolism and information transfer. Course Information: Same as BIO 475.

CHE 476. General Biochemistry Laboratory. 2 Hours.
This is a laboratory and supplemental discussion to CHE 475: General Biochemistry. The course will develop a competency with basic biochemical techniques, e.g. protein and DNA preparations. The course will also provide a more in depth coverage to the topics in CHE 475. Course Information: Same as BIO 476.

CHE 480. Special Topics In Chemistry. 1-4 Hours.
Advanced topics which may involve instruction, laboratory, and/or independent study. Topics will vary depending on student interest and area of expertise of instructor. Course Information: May be repeated if topics vary. Students may register in more than one section per term.

CHE 485. Advanced Biochemistry. 4 Hours.
This is an advanced one semester course in biochemistry that provides an in depth coverage of topics that expand upon the foundations established in CHE 475: General Biochemistry as well as explore developing areas of research in biochemistry. Course Information: Same as BIO 485.

CHE 499. Tutorial. 1-4 Hours.
Intended to supplement, not supplant, regular course offerings. Students interested in a tutorial must secure the consent of the faculty member concerned before registration and submit any required documentation to him or her. Course Information: May be repeated if topics vary.
